Supporting successful transitions in care

MHS Health Wisconsin supports integrated care for its members. We can help providers find the appropriate facility, specialist or physician for members. Patients with complex or coexisting conditions, individuals who are receiving behavioral health services, and older adolescents particularly benefit from thorough transitions in care.

We support members of all ages in getting the right care for their needs. MHS Health Wisconsin can assist members who are reaching adulthood choose an adult primary care practitioner.

Members who need help finding the right doctor or making appointments can call our Member Services at 1-888-713-6180. Providers can call 1-800-222-9831 for assistance.

When is the right time to shift to adult care?
The American Academy of Pediatrics recommends a transition to an adult care provider between 18 and 21 years old, considering each case individually and including discussion with the patient and his or her caregivers.

We encourage your staff to contact MHS Health Wisconsin for help transitioning a patient to a new physician, if needed. You can also find tip sheets and clinical resources at gottransition.org, a program of The National Alliance to Advance Adolescent Health.
Quality is a cornerstone

The MHS Health Wisconsin Quality Improvement (QI) Program has two primary goals:
1. To ensure the quality and safety of clinical care and services
2. To ensure compliance with any relevant state and federal regulations and accreditation (e.g., NCQA, URAC) standards

Toward this end, we’ve developed an extensive and comprehensive system to monitor compliance, member and provider experience, complaints, continuity and coordination of care, medical record documentation, as well as effectiveness of our case management and disease management services.

We define quality of care as care that is accessible, efficient and culturally sensitive and provided in the most appropriate setting. Wherever possible, delivery of care occurs within the member’s community and is provided according to professionally accepted standards in a coordinated, continuous manner.

Our QI strategy is developed with the help of practitioners and members. If you are interested in contributing to our QI efforts or have questions about our QI program, call 1-800-222-9831.

Examples of efforts underway to support our QI goals include:
- Our referrals team is including reminders to providers about open care gaps for our members who have authorization needs.
- MHS Health is offering enhanced reimbursement for smoking cessation counseling.
- Outreach continues to help members schedule mammogram van appointments.

Our QI goal is to advance members’ health through a variety of meaningful initiatives across all care settings. In 2013, MHS Health received a Commendable rating from NCQA, and maintained that rating in 2014 and 2015. Our health plan just completed our 2016 NCQA accreditation survey and are awaiting final results.

Community Education
As patient visits increase due to general respiratory ailments, runny noses and sore throats, here’s an easy way to educate about the difference between a sore throat and strep throat. Print out this chart and post it in your waiting room.

Sore or Strep

<table>
<thead>
<tr>
<th>VIRAL SORE THROAT SYMPTOMS</th>
<th>STREP THROAT SYMPTOMS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cough</td>
<td>Sudden throat pain and difficulty swallowing</td>
</tr>
<tr>
<td>Fever</td>
<td>Fever over 101°F</td>
</tr>
<tr>
<td>Mucous</td>
<td>Headache</td>
</tr>
<tr>
<td>Runny nose</td>
<td>Body ache</td>
</tr>
<tr>
<td>Watery eyes</td>
<td>Vomiting</td>
</tr>
<tr>
<td>Fatigue</td>
<td>Redness of the throat</td>
</tr>
<tr>
<td>There may also be redness in your throat, swollen lymph nodes or white patches on your tonsils.</td>
<td>Swollen lymph nodes</td>
</tr>
<tr>
<td></td>
<td>White patches on the throat</td>
</tr>
</tbody>
</table>

REMEMBER: Antibiotics are not a cure for viral conditions. To ease symptoms of a sore throat, try pain reliever medication, fluids, warm water with salt and lozenges.

REMEMBER: Antibiotics treat strep throat. Your symptoms could go away without antibiotics, but they are needed to help avoid complications and stop the spread of infection.

Why does HEDIS matter?

Through HEDIS, NCQA holds MHS Health Wisconsin accountable for the timeliness and quality of healthcare services (acute, preventive, mental health, etc.) delivered to its diverse membership. MHS Health Wisconsin also reviews HEDIS rates regularly as part of its quality improvement efforts.

Please consider the HEDIS topics covered in this issue of our provider newsletter:

- Women’s health screenings
- Flu

HEDIS health measures

**Chlamydia screenings** have remained relatively steady in the last few years—and that’s a good thing since 75 percent of chlamydia screenings in women are asymptomatic.

However, there is still room for improvement. The Partnership for Prevention program estimates if screening rates could reach 90 percent (up from the current rate which lingers between 50 and 60 percent), thousands of cases of pelvic inflammatory disease could be prevented every year.

**Breast cancer screenings** remain a critical way to improve survival rates. According to the American Cancer Society, among women with regional disease, the 5-year relative survival is 95 percent for tumors less than or equal to 2.0 cm, 83 percent for tumors 2.1-5.0 cm, and 65 percent for tumors greater than 5.0 cm.

**Cervical cancer** is preventable, with effective screening. Yet, according to the National Cancer Institute, only 46 percent of cervical cancers are diagnosed when the cancer is localized and highly treatable. Each year cervical cancer results in 4,000 deaths in the United States.

**The flu vaccine** is the best protection against flu and flu-related complications. Vaccinations can reduce flu-related hospitalizations by 71 percent, according to U.S. Department of Health & Human Services.

Let our guidelines be your guide

Our preventive care and clinical practice guidelines are based on the health needs of our members and opportunities for improvement identified as part of our Quality Improvement (QI) program.

When possible, we adopt preventive and clinical practice guidelines published by nationally recognized organizations, government institutions and statewide initiatives. These guidelines have been reviewed and adopted by the Centene Clinical Policy Committee and our QI Committee.

We encourage providers to use these guidelines, for both preventive services as well as the management of chronic diseases, as a basis for developing personalized treatment plans for our members and to help members make decisions about their healthcare.

If you have questions, you can reach MHS Health Wisconsin provider services at 1-800-222-9831.

For the most up-to-date version of preventive and clinical practice guidelines, go to www.mhswi.com. A copy may be mailed to your office as part of disease management or other QI initiatives. Members also have access to these guidelines.

Preventive and chronic disease guidelines include the following:

- ADHD
- Adult and child preventive services
- Asthma
- Breast cancer
- Depression
- Diabetes
- Immunizations, including influenza and pneumococcal

We measure compliance with these guidelines by monitoring related HEDIS measures and may perform random audits of ambulatory medical records. Our preventive care and clinical practice guidelines are intended to augment—not replace—sound clinical judgment. Guidelines are reviewed and updated annually or upon significant change.

Your role

Providers play a central role in promoting the health of our members. You and your staff can help facilitate the HEDIS process improvement by:

- Providing appropriate care within the designated timeframes
- Documenting all care in the patient’s medical record
- Accurately coding all claims
- Responding to our requests for medical records within 5 to 7 days

Provider web site

Get access to resources, education and training. Go to www.mhswi.com for the following materials:

- Preferred drug list
- Manual, forms, and resources
- Prior authorization online tool
- Provider news and educational information

On the secure portal, you can also:

- Check member eligibility and patient listings
- View historical health records and care gaps
- Submit claims and view claims status
- View and submit service authorizations
- Submit assessments
- Update demographic data
